

# SV2 Hospital Bed

## Customisable to fit your needs

### The next standard of care.

Creating a hospital bed like our SV2 takes collaboration. By working together with medical professionals like you all over the world, we are delivering a high-quality bed you can customise to your specific needs.

The SV2 is a feature-rich, value-driven bed that includes electronic controls with convenient, one-touch button positioning for both you and your patients, a low bed indicator, mobile headboard, optional fifth wheel, optional under-bed lighting and much more.

### Low bed indicator

Clearly indicates to caregivers when the SV2 is in its lowest position, helping to reduce patient injury from falls.

### Fifth wheel mobility

Enhances maneuverability, helping to reduce caregiver back injuries.

### Smart egress

One-touch button brings bed surface to its exiting height, helping to reduce patient falls.

### Fold-down siderails

Simplify patient exiting, while enhancing safety by fully covering and minimising entrapment gaps. Allowing ease of use for caregivers by tucking away with only one hand.

### Double regression

Allows backrest and knee-gatch regression to help reduce both sacral pressure and displacement of the patient.

### Mobile headboard

Easily adjustable bed height for a more ergonomic positioning for the caregivers.

### "Always-on" underbed light

Offers patients better sight during the night when exiting the bed, helping to reduce falls.

### Making a difference. Reducing our impact.

When we make products like our SV2 bed, we seek ways to use less and waste less – because we consider the wellbeing of our planet to be as significant as the health of the individuals who live on it.
